CMPE 491 Project Proposal

OxuTrace

Multimodal AI-Driven Misinformation Detection and Digital Content Forensics

Name of project: OxuTrace

URL of the project: https://fuad090.github.io/oxutrace/

Names of team members:

Fuad Musa Nuhu

Kağan Pekdemir

Kaan Yüksel

Supervisor: Ali Berkol

Jury members: Supervisor is yet to assign them**.**

Project description:

The aim of this project is to develop a system that uses artificial intelligence technologies to help identify fake news on digital platforms. The rise of social media and online sources of news has led to a serious proliferation of false and misleading information. Here, the project focuses on exploring approaches that can evaluate news content and support the evaluation of its reliability.

This project will explore the possible applications of artificial intelligence in fake news detection and will look into possible approaches to analyze news content. The proposed system aims to assist in detecting real and fake news and to support efforts to curb the spread of misinformation. The project aims to be a solution for information reliability in the digital environment and to raise awareness of the fake news detection.
